

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Please amend the following claims as indicated:

1. (Currently Amended) A method for distributing a password protected content file without revealing to a recipient a password that protects the password protected content file, comprising steps of:
 - a. distributing from one or more owner's computer to [the] a recipient's computer an unlocking program having a password embedded within the unlocking program, the password corresponding to the password that protects the password protected content file; and
 - b. distributing the password protected content file from the one or more owner's computer to the recipient's computer wherein the unlocking program includes logic that when executed by the recipient's computer causes the unlocking program to run [[runs]] separately from and monitor monitors at least one application program and to automatically supplies supply the password embedded within the unlocking program to the at least one application program upon the at least one application program loading the password protected content file wherein the password embedded within the unlocking program is not revealed to [[the]] a recipient using the recipient's computer.

2. (Cancelled)

3. (Cancelled)

4. (Previously presented) The method of claim 1, wherein steps a and b are repeated at a predetermined rate and wherein the password protecting the password protected content file and the password embedded within the unlocking program are different in each repeat cycle.

Claims 5 -19 (Cancelled)

20. (Currently Amended) An unlocking program stored on a computer readable medium to unlock a password protected content file stored on a computer readable medium and readable by an application program, the password protected content file being locked with a password, the unlocking program being embedded with a password corresponding to the password locking the password protected content file and having instructions logic to run separately from and monitor the application program and automatically supply the password locking the password protected content file to the application program upon the application program loading the password protected content file, wherein the password locking the password protected content file is not revealed to [[the]] a recipient viewing the password protected content file.

21. (Currently Amended) The unlocking program of claim 20, wherein the unlocking program includes logic ~~at least one instruction~~ to initiate the application program and to cause the application program to load the password protected content file.

22. (Previously Presented) The unlocking program of claim 20, wherein the unlocking program includes means for preventing a screen capture representing at least a portion of the content stored in the password protected content file.

23. (Cancelled)

24. (Currently Amended) The unlocking program of claim 20, wherein the unlocking program includes instructions logic that ~~monitor~~ monitors the running of at least one system administration program capable of terminating the unlocking program.

25. (Currently Amended) The unlocking program of claim 24, wherein the unlocking program includes instructions logic that automatically ~~terminate~~ terminates the system administration program upon detecting the running of such system administration program.

26. (Currently Amended) The unlocking program of claim 24, wherein the unlocking program includes ~~an instruction logic~~ that terminates the application program upon detecting the running of such system administration program.

27. (Currently Amended) The unlocking program of claim 26, wherein the unlocking program includes ~~an instruction logic~~ that terminates the unlocking program after the application program has been terminated.

28. (Cancelled)

29. (Currently Amended) The unlocking program of claim 20, wherein the unlocking program includes ~~an instruction logic~~ to prevent termination of the unlocking program.

30. (Previously Presented) The unlocking program of claim 20, wherein the password protected content file is characterized as a .pdf file.

31-32. (Cancelled)

33. (New) The method of claim 1 wherein the unlocking program contains authorization logic that when executed by the recipient's computer causes the unlocking

program to verify that it is operating on the recipient's computer that it was distributed to.
